"I recently had my vehicle in for repairs. They did a thorough check of the entire vehicle before work began, kept me posted on progress, and offered the use of a loaner vehicle during that time. Yeck's staff is knowledgeable and friendly. Very reasonably priced. Highly recommend Yeck's."

HIT A POT HOLE? LOOK FOR THESE WARNING SIGNS

Hitting a 2" deep pothole at 35 mph with your car creates 157 pounds of internal pressure on the tire (the average tire holds 36 psi). Needless to say, this can do a real number on tires, wheels, steering and suspension, and alignment. The non-profit Car Care Council urges motorists to watch for three warning signs to help determine if hitting a pothole has damaged their vehicle. If the damage isn't immediate, it will often appear 4 to 6 months later.

1. Loss of control, swaying when making routine turns, bottoming out on city streets or bouncing excessively on rough roads are indicators that the steering and suspension may have been damaged.
2. Pulling in one direction, instead of maintaining a straight path, and uneven tire wear, are symptoms of an alignment problem.
3. Low tire pressure, bulges or blisters on the sidewalls, or dents in the wheel rim will be visible and should be checked out as soon as possible, as tires are the critical connection between the vehicle and the road.

"If you've hit a pothole, it can be difficult to know if and to what extent your car has been damaged," said Rich White, executive director, Car Care Council. "It's a good idea to describe the symptoms to a professional technician who can then check out the vehicle and make the necessary repairs to ensure safety and reliability."

See You Soon! - Mark
